

HIGH PERFORMANCE VpCI® COATINGS

S-20

PRODUCT DESCRIPTION

S-20 is a water/solvent blend used to reduce the viscosity of water-based coatings. Adding water alone to achieve application viscosity often reduces the solids volume below useful levels. S-20 solves this problem. S-20 is recommended for adjusting the viscosity of Cortec VpCI-376, VpCI-386 and other water-based coatings.

RECOMMENDED DOSAGE

Normally a 5-10% addition to the water-based coating is sufficient to substantially reduce viscosity. Do not add more than 20% unless specifically recommended.

Note: Adding S-20 will increase VOC values, and this must be taken into account in areas where organic content is a concern.
